

Making it all make sense.

Better pricing, functionality and performance ...guaranteed.

OEM Solutions was born out of the need for small volume customization. Contract manufacturers have typically ignored the smaller original equipment manufacturing (OEM) markets because contract manufacturers have invested so heavily in automation that

they couldn't afford to turn the crank on low volume projects thereby forcing OEMs to live without the products they really need. Design firms, on the other hand, tend to generalize the industry thus taking away the competitive advantage of the original OEM. In either case the needs of the OEM customers are largely ignored. We are a company that specializes in the design and manufacturing of customized electrical controls.

Look for OEM Solutions...

- when you need a new marketing and sales boost
- you need a user interface in the HVAC/R language that salesmen, contractors, and customers can all understand
- you need a design according to your specs and your input so the control performs exactly like you want.
- when you need controls to save production costs, reduces labor, and consolidate inventory.
- when you need to solve engineering headaches and expensive service calls
- when you need to increase sales and gain an instant advantage in the market
- when you need something to set your products apart and creates buzz

We understand the OEM's needs for proprietary products and we sign non-compete and confidentiality agreements to protect our relationships and your design advantage.

We understand how to

utilize the mixed technology of automation and through hole processes to economically meet the specs, delivery times, and pricing requirements of today's more competitive OEM.

Our customers are HVAC/R corporations interested in

increasing market share, improving customer service, decreasing production costs, and adding communication features to their controls.
